

I'm a full stack developer who is passionate about building innovative front and back ends. You can view samples of my work as a freelance developer [here](#) and [here](#) or visit my [portfolio here](#). I am a Skillcrush UX Design and Front End Bootcamp graduate and student with CodeAcademy obsessed with building my full stack skillset with JavaScript, Python, HTML, CSS, and frameworks such as React, Next, Node to build even more robust solutions for my clients.

## WORK EXPERIENCE:

### Full Stack Developer

### Freelance

Jun 2022- Present

- Designed, built, and maintained 4 full stack websites for clients including an interactive photogallery and web accessibility website for charity festival for disabled folks.
- My clients received rave reviews from visitors to their websites, resulting in a combined increase of 75% in user engagement.
- Utilized GraphCMS API to create CRUD components for event tracking, speaker information, and blog posts for client websites, resulting a 95% increase in site visitors, and reduced client's time spent updating website by 75%.
- Received multiple referrals and stand out testimonials from clients, resulting in 3 new projects.
- Leveraged new technology on the go such as NextJS, GraphQL, and TailwindCSS, increasing my productivity by 50% and reducing worked hours by 30%.

## RECENT PROJECTS:

### Sixpo.ca

React | Next | Tailwind | GraphQL | GraphCMS | Vercel | Figma

Dec 2022 - April 2023

- Website built for a non-profit, SIXpo - Sexuality, Inclusion, and Exploration for their online and in person educational festival for disabled folks. Site utilizes dynamic routing, live updates to event schedule, filtered resources and blog posts.
- Collaborated with non-profit employees to ensure accessibility, increasing site engagement by 90%.
- Received positive feedback and appreciation, including partner organizations, resulting in 3 referrals.

### To Do List Desktop App

Python | GooeyPie | GitHub

April 2023

- Built CRUD application for Desktop utilizing Python and GooeyPie for the UI and GitHub for version control
- Users can create new items, delete specific notes or delete all, move notes to a completed list, complete all, and clear list.

### Raine Gauthier Photography

React | Next | Tailwind | GraphQL | GraphCMS | Vercel

April 2023

- Redesign and optimized SEO with Next, increased site engagement by 40%.
- Implemented client log in and authentication to allow for direct editing of photo galleries and CRUD functionality.
- Utilized dynamic routing for galleries with GraphQL and GraphCMS, reducing developer hours by 60%.

### Strolls: GDI Hackathon Winner

React | Tailwind | MapBox | Figma | Netlify

Sep 2022- Present

- Girl Develop It Hackathon Winner! This prototype app allows a user to explore their neighborhood and upload photos, and connect with their community. Features: searchable map with MapBox, fully responsive, photo uploads.
- Co-led a cross-functional team collaboration with 6 members, utilizing Slack, Zoom, GitHub, and Kanban to stay organized.
- Presented final project to judges and audience of over 500 people.
- Contributions: landing page, home page, about page, navbar and footer, and responsive functionality across all devices.

## SKILLS:

Languages & Frameworks - JavaScript, Python, React, Express, Node, Next, GraphQL, SQL, HTML, CSS, Git, Figma
